

## Partner Program

CPAS sponsors a Partner Program for our v5 product suite. There is an intense certification and endorsement process involved in the qualification of new CPAS Partners. CPAS Partners are typically professional service organizations with the requisite project management and technical skills to support this type of specialized implementation. In addition to the training component of the Partner Certification Program, Partners are also provided with ongoing technical support. Having access to CPAS implementation Partners gives our clients greater flexibility in managing their implementation and support services and resultant costs.

These relationships are bounded by active communication, candor, and trust and are governed by a framework of sound project management and software development/integration processes and practices. We strive to make the working environment open, interactive, and positive.

We believe that an alliance with the right partners is one of CPAS' critical success factors, both short term and long term.

Our clients value an IT services company that can ensure that their interests are put first and foremost, but also one that has a network of market-leading alliance partners that can provide a complete business solution to their business problems.
