

Pension and Benefits Administration

CPAS v5 - Reduce Cost, Time And Risk!

Pensions, eh?

Outdated technology will cost you time, money and clients—until now!

- Managing multiple interfaces on old technology platforms takes time.
- Multiple logins increase errors and frustrate users.
- Multiple currencies and laws require the use of additional software, increasing cost and complexity.

CPAS v5 lets you administer your defined contribution, defined benefit, and other benefit plan types on a single unified platform. Decrease your workload and strengthen your value proposition!

Designed for the Internet and for employee, employer, and administrator self-service, CPAS v5 is multi-currency, multi-language and multi-jurisdictional. It allows you to implement all the functionality you need to manage your current operations. CPAS v5 Enterprise Tools provide you with the control and capability to expand your product offerings in a cost-effective fashion as your needs and the market's demands change.

Reduce costs, reduce time to market, lower your risk—increase your market advantage

- CPAS is ISO 9001:2000 registered
- Complete 'Out of the Box' functionality to reduce time to market, cost and risk.
- Integrated Configuration Tools reduce your deployment costs.
- A member centric solution with a single member record for all administrative requirements.
- Runs on Oracle—a secure, powerful and scalable database.
- Table entries and 'Point and Click' configuration—no programming reducing time, cost and risk.
- Comprehensive audit and security controls.
- Available as an in-house or hosted solution.

Founded in 1985, and the winner of the *Global Finance Magazine* award for the "Best Pension Administration Services" for the past three years. CPAS Systems Inc. is a global supplier of pension administration software solutions.
